

BLADE REPLACEMENT AND ALIGNMENT

Detailer

Before you start it is important to know which is the top blade and which is the bottom blade.

BLADE REPLACEMENT

<p>Unscrew the blade and remove from the trimmer.</p>	<p>Loosen the screws on the back of the top blade, but do NOT remove them.</p>	<p>Standard alignment</p> <p>Slide the top blade forward so that the teeth are level with the teeth on the bottom blade, then pull the top blade back 0.25mm. Hold the top blade in position and tighten the screws.</p>	<p>Zero overlap</p> <p>If you require zero overlap, the top and bottom blade should be flush. The top blade should NEVER overlap the bottom blade as this can cause skin abrasions. Hold the top blade in position and tighten the screws.</p>
---	--	---	---

<p>Slide the top blade off, there is no need to undo the screws.</p>	<p>Oil the bottom blade then slide the top blade back into position.</p>	<p>Attach the blade to your trimmer.</p>
--	--	--

CAUTION: Ensure that the teeth on the top blade do not overlap the bottom blade, this can cause skin abrasions.
